

The House Spider

Spiders eat pests. **Spiders FEED** on common indoor pests, such as Clothes Moths, Cockroaches, Earwigs, Mosquitos and Flies. **IF** left alone **SPIDERS** will consume most of the insects in your home, providing an effective and hygienic home pest control service for **FREE**.

Clothes Moths & Larva

That expensive wool overcoat, suit, jumper, ruined by clothes moths.

Fleas

Blood suckers that cause misery to your pets. Costs a fortune to get rid of.

Earwigs

Accidental invaders, earwigs may produce a noticeable foul odour.

Mosquitos

Spread more diseases than any other flying insect. Responsible for killing more people than all the wars combined.

Silverfish

Silverfish are mainly a nuisance pest. Indoors, they can cause property damage by chewing holes in clothing, upholstery and paper goods, such as wallpaper and books.

Horseflies

(Cleggs) - Painful bites leaving a wound prone to infections.

Houseflies

Carrier of 41 human diseases. Lands on poo, vomits on it with digestive enzymes, stomps it into the poo with its feet to create a mush which it then sucks up. Then it comes for your food with all the diseases on its feet.

Gnats & Midges

Love sucking your blood and spoiling a day out.

Roaches

Spreads diseases which can make you seriously ill. Including food poisoning.
